

# Live Data Centre Upgrade - Enhanced Resilience and Security

Salute partnered with a leading technology provider to deliver a live data centre upgrade at its UK HQ, enhancing resilience and protecting critical IT assets without disrupting operations.

## Project data

-  **Deployment location:** UK
-  **Deployment type:** Live data centre upgrade and integration project
-  **Facility Type:** Technology manufacturing and secure ITAD site

## Our customer's business priority

- Enhance resilience and protection for critical IT infrastructure.
- Ensure uninterrupted operations within a secure, high-sensitivity facility.

## Problems our customer faced

- Complex live upgrade requirements in a fully operational environment
- Strict security and safety protocols governing access and works.

## Solutions provided by Salute

- Delivered a fully managed, RIBA-led design and integration project.
- Installed gaseous fire suppression and advanced smoke detection systems.
- Implemented phased works and continuous supervision to ensure zero downtime.

## Business Impact

### ➤ Improved resilience and asset protection

enhancing operational reliability through advanced fire and detection systems

### ➤ Seamless delivery in a secure live environment

maintaining full uptime through phased works and managed execution
